

Correction to Spotlight, February 2014

Heidi Dahlmann*

Chem. Res. Toxicol. **2014**, 27 (2), 157–158. DOI: 10.1021/tx500025s

In the February 2014 edition of Spotlight, the figures should appear in the following order: the drawing of exemestane and sulforaphane should appear under the subheading Exemestane Facilitates Multifaceted Chemoprevention instead of under Disruption of Glutathione Metabolism Kills Leukemia Cells. The drawing of parthenolide and piperlongumine should appear under Disruption of Glutathione Metabolism Kills Leukemia Cells instead of under Intestinal Glucuronidation Defends against CPT-11 Side Effects, and the drawing depicting CPT-11 biotransformation should appear under Intestinal Glucuronidation Defends against CPT-11 Side Effects instead of under Exemestane Facilitates Multifaceted Chemoprevention.
