**Hui Huang, Arnold L. Rheingold, and Russell P. Hughes\*:**  
Serendipitous Discovery of a Simple Compound with an  
Unsupported Ir–Ir Bond

Page 1575. In the second paragraph of the original paper, the third and fourth sentences should read as follows: Failure to adequately purify **7** led serendipitously to reaction of  $\text{AgO}_3\text{SCF}_3$  with samples of **7** that were contaminated with unreacted **6**, affording an additional new compound, which was isolated and crystallographically characterized as **9**. Retrospective analysis of this observation led to the reaction of pure **6** with 1 equiv of  $\text{AgO}_3\text{SCF}_3$  to give a black precipitate of Ag metal and exclusive formation of **9**.
