

**Analysis of Detergent-Insoluble and Whole Cell Lysate Fractions of Resting Neutrophils Using High-Resolution Mass Spectrometry** *J. Proteome Res.* **2010**, *4*, 2030–2036. Gisele G. Tomazella, Idalete daSilva, Carolina H. Thomé, Lewis J. Greene, Christian J. Koehler, Bernd Thiede, Harald G. Wiker, and Gustavo A. de Souza\*

The authors would like to declare that the method used for membrane extraction did not aim to specifically recover lipid rafts alone and that membrane constituents in general were recovered by the protocol. Therefore, whenever “detergent-insoluble fraction” is read, it should be replaced by “membrane-enriched fraction”.
